Our faculty treat students as future colleagues, working hand-in-hand on high-impact research projects addressing real-world problems related to areas such as metabolism and metabolic engineering, structural and chemical basis of protein function, molecular mechanisms of disease, plant and microbial biochemistry, and biotechnology.

It can also be paired with chemistry for a combined major or combined honours degree. Housed in the Faculty of Medicine, the program’s primary focus is on the biochemistry of the human body. Biochemistry can also be studied as an elective in biology, chemistry, microbiology and immunology, and cellular, anatomical and physiological sciences.

Biochemistry at UBC's Vancouver campus | UBC Undergraduate Biochemistry covers a range of scientific disciplines, including genetics, microbiology, forensics, plant science and medicine. Because of its breadth, biochemistry is very important and advances in this field of science over the past 100 years have been staggering. It's a very exciting time to be part of this fascinating area of study.

Glycoside | biochemistry | Britannica
The chemistry of nature - basis for active compounds for human and plant health.
Biochemistry of Plant Interactions Prof. Dr. Tina Romeis. Interactions in, of and with plants. Cell and Metabolic Biology Prof. Dr. Alain Tissier. Secondary but never unimportant - the biological functions of plant secondary metabolites. Independent Junior

The Chemistry of Carbohydrates Mar 08, 2019 - This is an overview of carbohydrate chemistry, including a look at the types of carbohydrates, their functions, and carbohydrate classification. List of Carbohydrates Elements All carbohydrates contain the same three elements, whether the carbohydrates are simple sugars, starches, or other polymers.
Biochemistry | Nebraska Botany Zoology

Chapter 6: Enzyme Principles and Biotechnological A mnemonic is a memory aid used to improve long-term memory and make the process of consolidation easier. Many chemistry aspects, rules, names of compounds, sequences of elements, their reactivity, etc., can be easily and efficiently memorized with the help of mnemonics.

IPB Halle: Leibniz-Institut für Pflanzenbiochemie Chemistry/Physics. Animal Lipid Biochemistry; Plant Lipid Biochemistry; Microbial Lipid Biochemistry; Frying Oils; Lipid Chemistry; Human Nutrition. Denaturation (biochemistry) - ScienceDaily 1. Glucose. Carbohydrates have been given non-systematic names, although the suffix ose is generally used. The most common carbohydrate is glucose ([C 6 H 12 O 6].Applying the terms defined above, glucose is a monosaccharide, an aldohexose (note that the function and size classifications are combined in one word) and a reducing sugar.

Carbohydrates - Chemistry Glycoside, any of a wide variety of naturally occurring substances in which a carbohydrate portion, consisting of one or more sugars or a uronic acid (i.e., a sugar acid), is combined with a hydroxy compound. The hydroxy compound, usually a non-sugar entity (aglycon), such as a derivative of

Carbohydrates Biochemistry Short Notes | Easy Biology Class UCLA Department of Chemistry & Biochemistry General
What is biochemistry? | Biochemistry Mar 08, 2019 · Denaturation is the alteration of a protein shape through some form of external stress (for example, by applying heat, acid or alkali), in such a way that it will no longer be able to carry out
